CERTIFICATE

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

This is to certify that the Community Service Project Report entitled “**FOOD WASTAGE MANAGEMENT**” is being submitted by **CHINDADA NANDINI (20A31A05D4)**, in partial fulfillment for the award of the Degree of **Bachelor of Technology** in **DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING** of Pragati Engineering College, for the record of bonafide work carried out by him/her.

Dr.M.Radhika Mani
B.Tech,M,Tech,Ph.D
Professor and HOD
Department of CSE

Dr.D.V.Manjula
Ph.D
Assoc.Professor
Department of CSE

ACKNOWLEDGEMENT

I wish to express my gratitude to those who extended their valuable co-operation and contributed towards the project.

I would like to express my special gratitude to our principal, Dr. K. Satyanarayana, who gave me the golden opportunity to do this project.

I would like to express my gratitude to Dr.M. Radhika Mani,B.Tech,M.Tech,Ph.D,Professor & HOD,Department of Computer Science and Engineering for facilitating this project with her guidance throughout the duration of the project.

I would like to thank my project guide, Dr.D.V.Manjula,Ph.D,Department of Computer Science and Engineering, for her valuable time and continued assistance for the successful completion of the project.

I would like to thank my project coordinator Mr. Sayathan,Asst.Professor, Department of Computer Science and Engineering, for his valuable time and continued assistance for the successful completion of the project.

I would like to express my gratitude towards my parents and cousin for their kind cooperation and encouragement, which helped me in completing this project.

I would like to be thankful to the managers and workers of the restaurants and function halls that I have visited in the places of Kakinada, Samalkot, and Peddapuram.

PART-A

1.About the Village / Habitation.

KAKINADA:

Fig.1-City,Kakinada District,Andhra Pradesh

SAMALKOT:

Fig.2-Town,Kakinada District,Andhra Pradesh

PEDDAPURAM:

Fig.3-Urban,Kakinada District,Andhra Pradesh

Village 1:Kakinada

Kakinada is a metropolitan city in Kakinada district of Andhra Pradesh,India.Although Kakinada city has population of 312,538; its urban /metropolitan population is 443,028 of which 217,459 are males and 225,569 are females.

Number of Restaurants:110

Number of Function Halls:100

Number of Orphanages:15

Village 2:Samalkot

Samalkot is a Municipality city in district of Kakinada,Andhra Pradesh.Although the Samalkot Municipality has population of 56,864 of which 28,115 are males while 28,749 are females

Number of Restaurants:20

Number of Function Halls:8

Number of Orphanages:10

Village 3:Peddapuram

Peddapuram is a mandal in district of Kakinada,Andhra Pradesh state. Although Peddapuram has a population of 73,922, of which 37,379 are males, and 36,543 are females.

Number of Restaurants:20

Number of Function Halls:15

Number of Orphanages:8

2.Socio-Economic Survey of the Village/Habitation.

Enquiries and Queries

1.How much food is prepared every day, approximately?

A. That is based on the person's count who visited that particular day , and approximately prepared for 80 members, i.e., 25 kg of food.

2.How many customers visit the restaurant daily?

A. There are approximately 60-80 members.

3.How many types of recipes are prepared per day?

A.Approximately 20–25 types of recipes are prepared.

4.Which type of food is served most often?

A. Spicy dishes such as Biryani and Staters

5.Which type of food is left over the most?

A. Spicy foods like Biryani

6.What chemicals are used to preserve the food?

A. There are three categories of chemical preservatives commonly used in foods:

Benzoates (like sodium benzoate) Nitrites (like sodium nitrite) Sulphites (like sulphur dioxide)

7.How many days was the food preserved?

A. Approximately 3-4 days.

8.Are there chemicals that show any impact on human health?

A. We used safety chemicals, but sometimes as a result it becomes less harmful.

9.What amount of food is left over?

A.According to data collected from restaurants, nearly 5–10% of food is wasted every day.

10.How is left over food managed?

A.Most of the wasted food is given to workers or thrown in the garbage.

11.The food that is wasted per day is sufficient for how many people?

A.Approximately 3-4 people

12.What can you do to help prevent food waste?

A.Preparing sufficient food is all we need.

13.How do restaurants maintain the quality of food?

A.Document ingredients (like quality of purchase, purchase date, expiry date,nutrition

value) and define standards for ensuring food safety and also keep track of inventory for food production.

14.In which seasons do you see the most food waste?

A.Mostly April-May and shortly into June months due to the functions like marriages.

15.At any time, have you donated leftover food to any orphanages?

A.Yes, we occasionally give food to people on the sidewalk. Mostly, the workers will take away the food.

3. Problems identified for the wastage of Food

- Lack of estimation of Customers.
- Dumping excess food into garbages without donating
- Food wastage is more during wedding seasons.
- Throwing away the food item which they don't like-Consumer behaviour.
- Many of the poor people(hungry and homeless) starving due to lack of food.
- Excess food is being dumped and hungry mouths are going unfed.
- Decreases the nutrition value when food stored for long time in fridges.
- Over food serving to customers.
- Spoilage of food when preserved for more time.
- Lack of awareness about the food waste problem.
- Human error-Lack of appropriate planning.
- Aging Ingredients used for preservation of food.
- Lack of knowledge of how many customers attend the function.
- 10% quantity of food wasted per day.
- Half-eaten plates.

4.Short-Term and Long-Term Action Plans

Short-Term:

Food waste is a big problem in 21st century society, and in order to stop this, we conducted an awareness camp to share our knowledge gained from the survey of the field visit programme in restaurants and function halls in our locality for reducing food waste and donating the leftover food to the nearby orphanages.

Long-Term:

After the field visit, we identified that much of the food is being wasted in restaurants and function halls. As a result, we decided to create an application to aid in the reduction of food waste and donate the excess food to the needy. We built a web application in which the members of the restaurant and function halls provide information about leftover food, and we make use of the data and forward this information to the nearest orphanages to collect the food.

5.Community Awareness Programmes

- As a part of our 7-day awareness programme campaign, we interacted with the locals of Kakinada city and told them about food wastage and people who are starving due to lack of food, and we motivated them to donate food to the needy instead of throwing it away.

Fig.1

- DAY-1: On the first day of our campaign, we gathered about Seven Members and gave awareness about the importance of food.

Fig.2

- DAY-2: On the second day of our campaign, we gathered about Eight Members and made them aware of which types of food should be eaten and which should not.

Fig.3

- DAY-3: On the third day of our campaign, we gathered about Nine Members and told them about the consequences of eating junk food and also about the advantages of eating healthy food.

Fig.4

- DAY-4: On the fourth day of our campaign, we gathered about Seven Members and brought awareness about the amount of food wasted in restaurants and function halls.

Fig.5

- DAY-5: On the fifth day of our campaign, we gathered about Six Members, and briefly explained about the amount of food produced annually in India, the amount of food consumed, and the amount of food.

Fig.6

- DAY-6: On the sixth day of our campaign, we gathered about Eight Members and made them aware of how the people in the orphanages are facing tough times due to a lack of food.

Fig.7

- DAY-7: Finally, on the seventh day of our campaign, we gathered about Six Members and made them think before throwing the excess food into the garbage, and we highly motivated them to not waste the food and donate the leftover food to the poor and needy instead of wasting it.

PART-B

ABOUT:

- **Project Title :** Food Donation Management
- **OverView :** Donation of leftover food from restaurants and function halls
orphanages
- **Project Justification :**
- **Objectives :** To reduce food wastage and help the needy
- **Phases of Work :** Our work has been classified into 4 phases

Phase 1: Getting Domain Knowledge

Phase 2: Designing

Phase 3: Building Code

Phase 4: Testing Code

REQUIREMENT:

Software Requirements:

Frontend:

- **HTML**
- **CSS**

Backend:

- **JAVA SCRIPT**

We require some system software applications to run, like Visual Studio Code,

Notepad.

DESCRIPTION :

In this project, we have given a solution to the problem that we have identified regarding food wastage in our survey. This represents crowd resourcing on food waste management, where the leftover food is donated to the needy and to people who lack or suffer from food. The need for donations is due to the wastage of food. In this present scenario, food wastage is present in large quantities in many places, like restaurants, weddings, social functions, college canteens, and many other social events. Some people donate food manually by visiting some organizations. In order to reduce the issue of food wastage, we designed a new approach where leftover food is donated to needy people or organizations, benefiting the needy. The system is an effective means of donating food to organizations, orphanages, etc., over the Internet. A new donation request will be created on the portal, and once the request is accepted, the food request from food donor to food receiver will be processed.

Delivered at: Sun, Sep 4, 2022 3:21 AM (UTC)

PART-C

1.Recommendations and Conclusions

Our study has looked into the problem of food waste, where excess or leftover food is wasted instead of being donated. So we thought of creating a web application in which the user gives information regarding the leftover food, and this data is further processed and sent to the nearest orphanages, so that we can justify the value of food and hunger. The approach was flexible and user-friendly.

One of the primary applications of this food waste management system is to make use of leftover food by feeding the hungry. Our proposed solution reduces food waste by facilitating food sharing in groups or orphanages using technology. This research is the first step toward developing a better system to reduce daily food waste.

Our future work is aimed at extending our application by adding the location facility. The donating user either identifies the location of the shared food or has control over sharing the food to a specific location.
